COVID-19 CONTACT TRACING AND QUARANTINE GUIDELINES

No.31/F2/2020 Health 22nd August 2020

In superseding all the previous advisories, guidelines regarding the contact tracing and quarantine, the revised guidelines for contact tracing and quarantine are issued for implementation in the State of Kerala.

PART-I

DEFINITION AND CLASSIFICATION OF COVID CONTACTS

Contact: The World Health Organization (WHO), defines contact as:

Anyone with the following exposures to a COVID-19 case (alive or dead) **from 2 days before to 14 days after the case's onset of illness**. If confirmed cases are **asymptomatic**, contacts should be managed in the same way as for a symptomatic case with an exposure period from 2 days before the case was sampled, to 14 days after.

CONTACT	DESCRIPTION
High Risk Contact	<ol style="list-style-type: none">1. Shared space within 1 metre of a COVID-19 case for >15 minutes2. Direct physical contact with a COVID-19 case3. Direct care for patients with COVID-19 without using proper personal protective equipment (PPE)4. A person living in the household of a confirmed case5. Sharing a room, meal, or other space with a confirmed patient6. Touched or cleaned the linens, clothes or dishes of the patient without wearing mask and not practicing hand hygiene7. Other patients# hospitalized in the same room or sharing the same bathroom as a COVID-19 patient or visitors to the patient

	<ol style="list-style-type: none"> 8. Health care workers# who have cared for the COVID cases / handled samples without adequate PPE or breach of PPE 9. Health care worker who has performed an aerosol generating procedure without any of the following: Face shield, N95 mask, Gloves or had contact of body fluids on non-intact skin or mucous membranes 10. Travel (any mode) in the same environment within one metre of a lab confirmed case
Low Risk Contact	<ol style="list-style-type: none"> 1. Other persons who have shared the same time and space with the confirmed case and not having high risk contact 2. Travelled in the same environment (any mode of transport) but not having high risk as above 3. High risk contacts falling in points 1,2,6,10 who have taken adequate COVID precautions like wearing a three layer mask/N95 mask, practiced frequent hand hygiene and did not have other high risk contacts as mentioned above

In situations where it is difficult to classify the exposure, a detailed exposure history should be taken and classification done on a case to case basis.

Patients and health care workers becoming confirmed cases should be investigated on a case to case basis. A detailed contact history and contact tracing should be done to identify patients and health care workers exposed in wards, rooms, ICUs, bathrooms and other facilities in the hospital.

PART-II
