User Manual of Module for Addition of Land

The **Land Addition Module** in the Farmer Registry enables farmers to add and claim land parcels that were not included or claimed during their initial Farmer Registry registration. The approval workflow for these requests will remain the same as the existing process, with verification and approval to be carried out by the Revenue Department before the land is successfully added to the farmer's record.

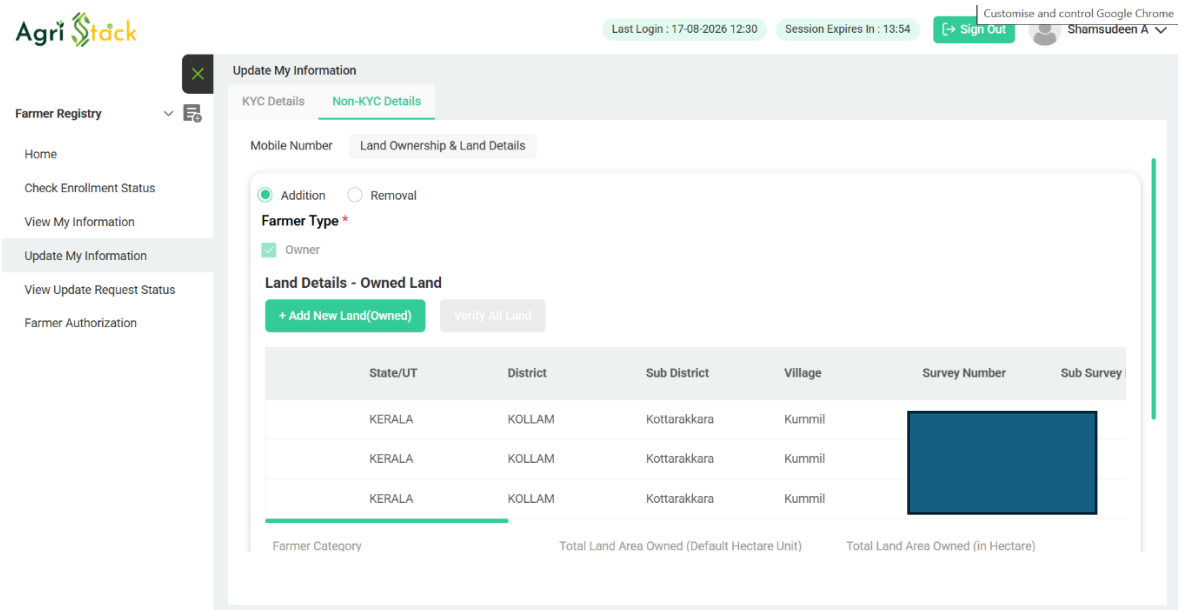

Step 1: Access the Land Addition Module

Farmer must first log in to the Farmer Registry portal using their User ID (registered mobile number) and password. After successful login, navigate to Update My Information from the left-side menu. Under Non-KYC Details, select Land Ownership & Land Details to access the land details management section and initiate the process for adding previously unclaimed land parcels.

Step 2: Select Addition and Add New Land

Under the Land Ownership & Land Details section, select the Addition option to add a new land parcel to the Farmer Registry. Then, click the + Add New Land (Owned) button to initiate the process of adding a previously unclaimed owned land parcel to the farmer’s profile.

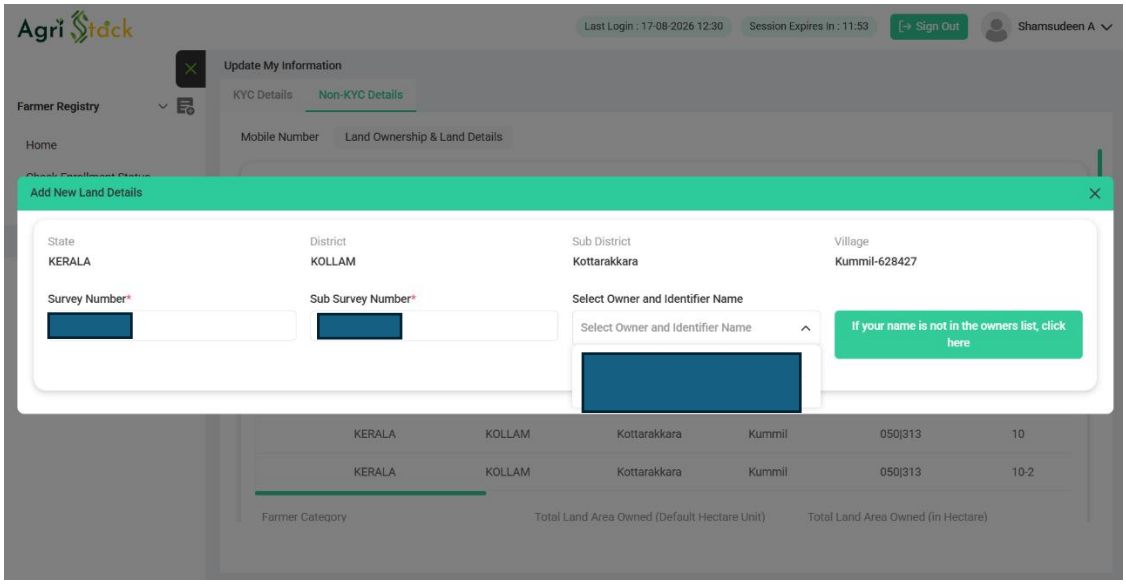

Step 3: Enter Land Details and Select the Owner

After clicking + Add New Land (Owned), **the Add New Land Details window will open. Select the relevant District, Taluk/Sub-District, and Village**, and then enter the Survey Number and Sub-Survey Number of the land parcel.

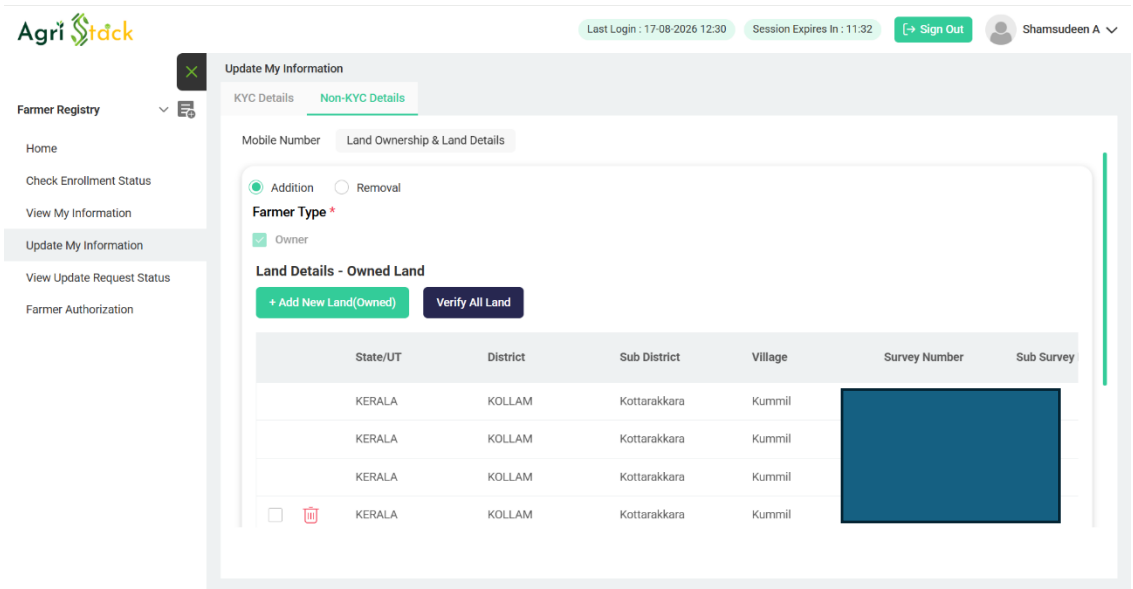

The system will automatically retrieve and display the list of landowners associated with the entered land details under "Select Owner and Identifier Name." The farmer should select their name from the available list of owners.

If the farmer's name is not available in the owner list, click "**If your name is not in the owners list, click here" and fetch the land details by following the procedure outlined in the User Manual for Registration of Farmers whose Land is not Available during Normal Process of Registration**. Once the owner's details are successfully fetched and displayed, select the appropriate owner’s name and proceed to Submit the land addition request.

Step 4: Verify the Added Land Details

After the new land parcel has been added and appears in the Land Details - Owned Land list, review the entered details to ensure they are correct. Select the newly added land parcel and click the Verify All Land button.

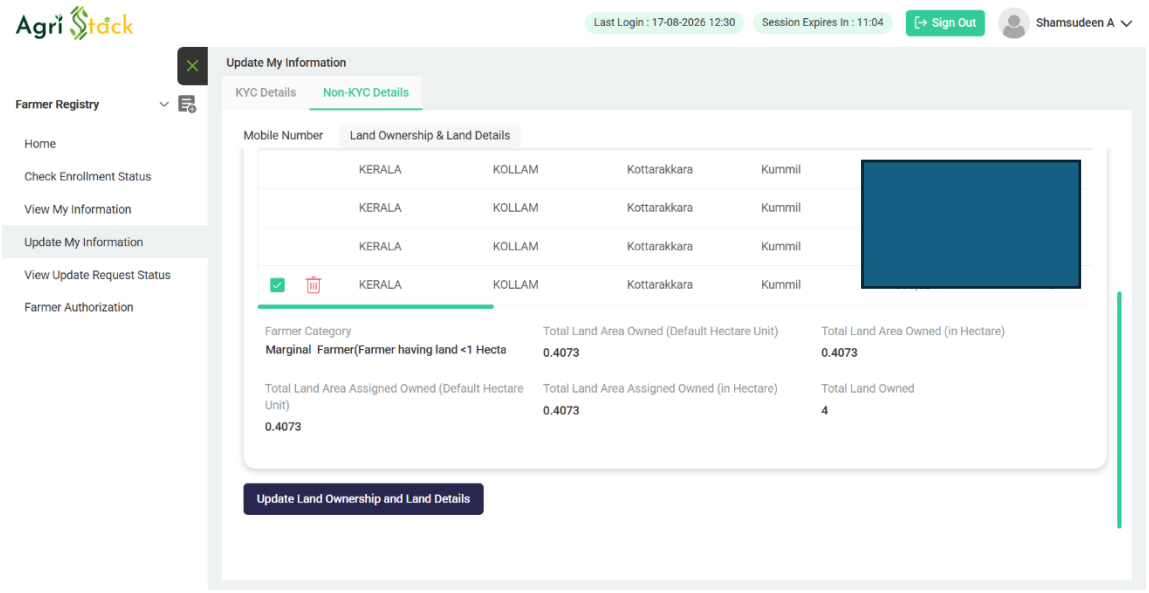

Step 5: Submit the Land Addition Request

Once the land details have been successfully verified and the newly added land parcel appears in the Land Details - Owned Land list, review the information displayed on the screen. After confirming that all details are correct, click the **Update Land Ownership and Land Details button.**

Upon submission, the land addition request will be forwarded to the Revenue Department for verification and approval as per the existing Farmer Registry approval

workflow. The land parcel will be added to the farmer's profile only after the request is approved by the Revenue authorities.

NOTE: Currently ROR Data up to May 2026 is available in the Farmer Registry database for registrations and Land addition process
